DETAILED ACTION

1. Applicant is required to update status of related application, i.e., providing serial number, cited in page 1 of the specification.

Art Rejections:

2. The texts of 35 USC 102(e) and 103(a) not cited here can be found in the previous office action.

3. Claims 1, 3-7, 9 and 12 are rejected under 35 U.S.C. § 102(e) as being clearly anticipated by Moshfeghi et al, U.S. pat. No. 6,216,104.

Moshfeghi discloses a server comprising:

- a) an interface (18, fig. 1) to a data network (see col 3, lines 3-10),
- b) an interface to a plurality of text/message/voice/speech processing resources (34, 36, 51, fig. 1) including emails, speech recognition, voice mails, paging, etc. (see col 3, lines 19-33 and col 5, lines 25-36),
- c) a CORBA middleware server (14, fig.1) for receiving and decoding a user request from a client application (12, fig. 1), coupled to the data network, an object-oriented language independent request for accessing the resources (see col 3, lines 11-16).

Serial No. 09/223,972

4. Claims, 2, 8, 10 and 11 are rejected under 35 U.S.C. 103 as being unpatentable over Moshfeghi and further in view of Jordan et al, U.S. pat. No. 6,163,535.

Per claims 2 and 10-11, Moshfeghi's teachings are still applied as discussed above. It is noted that Moshfeghi's system utilizes one or more conventional telephony subsystems (51, fig. 1) for providing messaging services (see Moshfeghi's col 5, lines 25-33). Moshfeghi does not disclose a telephony subsystem in details. Jordan discloses a voice processing subsystem in a conventional telephone network. Particularly, the subsystem comprises a central call manager (30, fig 2) for tracking availability of the resource components (see Jordan's col 10, lines 30-36) and for communicating access requests to call routers and signaling system components using object-oriented protocols such as CORBA (see Jordan's col 7, lines 49-53).

It would have been obvious to one of ordinary skill in the art at the time the invention was made to utilize Jordan telephony subsystems in Moshfeghi because it would have allowed the middleware server to directly communicate with the voice processing components (e.g., using CORBA).

Per claim 8, Jordan teaches providing users various voice/messaging services including a fax service (see Jordan's col 2, lines 31-34).

Serial No. 09/223,972

Response to Amendment:

5. Applicant's arguments filed on 12/23/02 with respect to claims 1-12 are moot in view of new ground of rejection set forth above.

Conclusion:
